Title: Blue

Date Completed: 4/7/16
Size: 9” by 12”
Materials: Canvas paper, Acrylic Paint
Graffiti art was my gateway into the world of art and design. I became interested in this particular subject several years ago and fell in love with the street grungy style that graffiti contains. I developed the name EONS for myself simply because I like the way the letters flowed verbally and on paper. Here are some drawings of past graffiti sketches I was potentially going to paint. Also featuring an 8' by 16' graffiti piece I created using spray-paint.

Date Completed: 8/8/15
Size: 8' by 16' (Paper Sketches 8.5” by 11”)
Materials: Black pen, printer paper, Prisma-color markers, Spray Paint
My mother is a genuine lover of wine, but she never had a proper place to store it, keeping it instead in a box in our pantry. I decided it was time she had an appropriate place to keep and showcase her wine collection to her guests. Here are some concepts I drew up in exploring wine rack design, and a final designed I rendered in Solidworks.
In constructing this piece, I used birch wood to create the frame and shelves, and then square wood rods with rounded tops to create a small rack for each bottle so they stay in place. Finally the piece was stained and varnished. This piece turned out very successful with a sturdy, simplistic practical design.

Wine Rack

Date Completed: 1/16/16
Size: 16” by 30.5” by 25”
Materials: Birch wood, wood glue, brad nail gun, wood stain and varnish
Lately I have become very inspired by shoe design and started to make some sketches of my own. Here are some designs of a Chelsea boot style runner I have been exploring. I liked the idea of a high top runner/trainer that didn’t require the tying of laces to fasten and remove them. The boots feature an elastic portion from the top of the boot straight down to the sole. All of my shoe sketches are done on standard 8.5" by 11" sheet of paper, black pens and some Prismacolor markers for touches.

Date Completed: 8/13/16
Size: 8.5" by 11"
Materials: Printer paper, Black Pens, Prismacolor markers
Out of all shoe brands pushing footwear design to new levels, Adidas stands out the most to me, and is truly pushing shoe design to its fullest potential. With simplistic, minimalist, and futuristic designs, Adidas has inspired me to create some three striped renditions of my own. Here are sketches of my own ideas for some Adidas sneakers featuring strapped runners, boots, and lifestyle low tops.

Date Completed: 1/12/17
Size: 8.5” by 11”
Materials: Printer paper, black pens, Prismacolor markers
Here are some more Adidas renditions of some sneakers on the market now. These sketches feature shoes from Adidas NMD, and Adidas Y-3, and some collaboration between the two innovative branches of the brand.

Date Completed: 1/15/17
Size: 8.5” by 11”
Materials: Printer paper, black pens, Prismacolor markers
I recently took ID 120 and enjoyed the form study class very much. This course inspired me and pushed my designs further than I ever have pushed them before. Here are some of my best works from the course, the projects I thought turned out most visually appealing.

Date Completed: 5/29/16
Size: Each around 64 square inches
Materials: Cardstock, clay, copper wire, hot glue, wood rods and platforms
Using what I learned from ID 120, I created some additional form studies on my own time to create inspiration for a bench in my mother’s garden. Here are the three concepts I narrowed it down to, in order to create a functional, yet visually interesting bench.

Date Completed: 1/2/17
Size: Roughly 8” by 8” by 8” each
Materials: foam core, Styrofoam
I chose the piece which I thought was most functional and practical for me to build (photo bottom left). I used birch wood to construct the bench, and had to tweak the design slightly for stability reasons, but very much enjoyed how energetic and interesting the piece came out to be.
The final construction was painted white to show the true form as much as possible, and to contrast the dark greens and browns in the garden. The pieces were fastened together with wood glue, wood screws, and a brad nail gun. And a big shout out to my sister for being my model even on such a rainy day.

Visual Bench

Date Completed: 1/27/17
Size: 2’ by 4’ by 2.5’
Materials: Birch wood, wood glue, wood screws, brad nail gun, white wood paint
My roommates and I are currently interested in building a greenhouse on our property since we have quite a bit of space and we would like to grow our own food. I saw this as an opportunity to begin exploring architecture. Here are some early concepts of greenhouses/workspaces we could potentially build.

Date Completed: 1/17/17
Size: 8.5” by 11”
Materials: Black pen, printer paper
Horticultural Homes

As I was creating these and sharing my ideas with one of my roommates, we started toying the idea of creating a business out of designing self-sustaining homes/greenhouses (as he is a business and sustainability major and geology minor). I believe with the growing market in green technology, we could potentially take this idea and be successful with it. Here are some refined sketches of potentially sustainable, greenhouse homes.

Date Completed: 1/25/17
Size: 8.5” by 11”
Materials: Black pen, paper, Prismacolor markers
